two events on

chessss

Code for Hermann: Enhanced Structural Summary
and Supplementary Scales

CHESSSS is an open source project for the Rorschach community of practitioners and researchers. It can be freely distributed and adjusted to one's particular needs.

It is an efficient and user-friendly application. Its use and even its programming do not require a high level of IT skills.

CHESSSS helps clinicians, researchers and students to manage their own data as desired in a free and autonomous manner.

We are pleased to announce two events on CHESSSS: a presentation of CHESSSS and a more in-depth look at its features and how it can be used by Rorschach professionals.

About the speaker
Patrick Fontan is a clinical psychologist. He specialises in psychological assessment and is currently undertaking research on psychometric issues of the Rorschach Comprehensive System. He is currently an assistant lecturer at Reims University, France. While working on his doctoral thesis, he developed CHESSSS software as a way of dealing with data management issues related to the Rorschach Comprehensive System.

Presenting CHESSSS: a free online seminar

Monday 21 October 2013

5.00pm, London (GMT); 6.00pm, Paris (GMT+1); 7.00pm, Istanbul (GMT+2)
12.00pm, Rio de Janeiro (GMT-4); 1.00pm, New York (GMT-5)

This 20 minutes online seminar will present an overview of CHESSSS including a brief history of its development. The presentation will focus on the main innovative features that have been developed. Guidance for installing CHESSSS will be provided.
